

Code Review

Code : ADT_Data_Chapter1_2019-20.ipynb

1. Comments and Readability:

- Comments are sparse. While some variable names are descriptive, more comments could improve clarity.

2. Readme File:

- There's no readme file I could find.

3. Understanding the Code:

- The code structure is straightforward, but the lack of comments makes it difficult to understand the intention behind each step.

4. Coding Standards:

- Follows PEP 8 guidelines quite well, but variable names are not consistent.

5. Code Duplication:

- There seems to be some code duplication, particularly in the functions like `remove_first_col` and `get_final_index`.

6. Unit Testing and Debugging:

- Can be done, but would be difficult to address some of the complex functions thoroughly.

7. Function/Class Size and Modularity:

- Some functions, like `find_header` and `remove_header`, appear to be doing multiple tasks.

8. Code Formatting:

- The code formatting appears a bit inconsistent.

9. Code Reusability:

- The looks pretty reusable.
